B

REVENUE-MODEL

GOEMAN GLOBAL FINANCE · CONFIDENTIAL — FOUNDER · **JUNE 29, 2026**

Strategic guidance only — not legal, financial, tax, or investment advice. Securities, money-transmission, and corporate-formation decisions must be reviewed by licensed counsel and a CPA before you act. Sections flagged "⚖ see counsel" are where this matters most.

Contents

Revenue Model — full product suite, phased to the compliance ramp

How Goeman makes money, product by product, gated by the phase that legally unlocks it. Growth-first: the collectibles wedge **acquires**, the wallet **retains**, the stack **monetizes** as you cross-sell into a trusted base — and the agent-operated cost structure lets you price below incumbents.

> **How to read this.** Companion to `GTM-COLLECTIBLES-LAUNCH.md` (which sequenced the *marketing* waves — this sequences the *money*), `LAUNCH-READINESS.md` (the prod-fatal switches that gate each line), and `CORPORATE-STRUCTURE.md` (the Corp A/B/C ramp). Tags: **DO NOW**, **DEFER → Corp B/C**, ⚖ **see counsel**.
> ⚖ **Illustrative — not financial or legal advice.** Fee/take-rate figures are benchmarked planning estimates (vs. eBay/Stripe/Chime/Robinhood), not quotes; projections in §4 are **illustrative**, not forecasts. Interchange, net-interest-margin, FX, securities, and lending lines each require counsel/CPA (`CORPORATE-STRUCTURE.md` / `GO-LIVE-PLAN.md`).

---

1 1. The revenue thesis

Land-and-expand. Don't monetize the wedge — monetize the *stack*. Win users with cheap, high-trust collectibles (low take rate vs. eBay) and a zero-interchange rail, then earn as each downstream product attaches to a base that already trusts you. Three structural advantages:

- **The wedge is sticky and supply-moated** (graded slabs + provenance), so acquisition cost stays low.
- **ARPU compounds**: a collector who also holds a USD balance, taps a card, sends cross-border, and buys an RWA is worth multiples of a single-product user — and each attach is a *new revenue line*, not a discount.
- **The agent-operated cost structure** (PRD target **<$0.50/MAU** operating cost) is a durable **margin** advantage: Goeman can undercut incumbents on price and still make money, because the back office is agents, not headcount.

The honest spine — revenue follows the licence, not the code:

Phase	What you can charge	Shape
A (now)	Software/SaaS only (subscriptions, tokenization, promotion) — **no** transaction take rate	**Thin**
B (partnered)	Marketplace take rate + interchange + net-interest-margin + FX spread	**Inflection**
C (licensed)	Brokerage/RWA + lending + **own-rail economics** (recapture the partner share)	**Compounding**

You **cannot book revenue from a switch that's off** (`LAUNCH-READINESS.md` §3). The plan is sequenced so every line turns on only when its gate clears.

---

2 2. Revenue by phase (the core)

Phase A — non-custodial software, no customer funds (DO NOW)

The only thing you can charge for without being a money business is **software/SaaS revenue you keep** — *not* a take rate on a peer sale (that's intermediation = Corp B). Honestly thin until the marketplace goes transactional, consistent with the GTM "audience-now, launch-at-Corp-B" timing.

Line	Mechanism	Benchmark	Gate
Goeman Plus/Pro subscription	Monthly collector tier (price alerts, agent discovery, portfolio view, priority authentication)	~$5–15/mo (PRD plans tiers; free tier at launch)	Phase A ✅
Tokenization / authentication fee	Flat per-slab fee to mint provenance (a software service, not a sale)	~$1–5 / slab	Phase A ✅
Featured listing / promotion	Seller pays to boost placement (software)	flat or tiered	Phase A ✅
Provenance / data services	API/report access to authenticated history	per-call / tier	Phase A ✅

> Phase-A monetization is **revenue you collect for software** (Stripe processes *your* revenue — that's not money transmission). It is **not** a cut of buyer→seller funds; that needs escrow + Corp B.

Phase B — partnered: BaaS bank + FinCEN MSB + custodian (the inflection)

Line	Mechanism	Benchmark	Gate (switch)
Collectibles marketplace take rate ⭐	Seller fee on each escrow-protected sale	**~2–5%** (vs. eBay ~13%, auction houses ~20%+)	`COLLECTIBLES_ESCROW_ENABLED` ⚖
Card interchange	Share of interchange on debit spend	**~1.0–1.5%** of spend (Durbin-exempt partner BIN)	`CARDS_ENABLED` ⚖
Net interest margin / float	Yield earned on idle USD balances via partner-bank sweep (you keep the spread)	a few % of balances × NIM	`BANK_RAILS_ENABLED` ⚖
FX spread	Markup on currency conversion (the built `FX_SPREAD_BPS` ~50bps + cross-border markup)	**~0.5–1.5%**	`FX_ENABLED` / `FX_SETTLEMENT_ENABLED` ⚖
Instant/expedited + ACH/wire fees	Optional fee for instant withdrawal; wire fees	$ flat per txn	`BANK_RAILS_ENABLED` ⚖
Bill-pay	Small fee or float on scheduled payments	$ flat / float	`BILLPAY_ENABLED` ⚖
Goeman Pay	**Zero rail fee** (the wedge — do **not** add interchange) → monetize via **merchant SaaS / premium**	$/merchant/mo	`ARGUS_PAY_ENABLED` ⚖

> The marketplace take rate is the flagship Phase-B line; interchange + NIM + FX are the "boring bank" lines that turn a marketplace user into a primary-account ARPU. **Goeman Pay stays free** — it's an acquisition/retention rail, not a revenue line (the wedge from `PAYMENT-NETWORK-STRATEGY.md`).

Phase C — licensed: own MTLs, broker-dealer/ATS, transfer agent (compounding)

Line	Mechanism	Benchmark	Gate (switch)
Brokerage	Commission/spread + **margin interest** + a **Gold-style subscription**	sub ~$5–10/mo; margin ~5–11% APR	`TRADING_ENABLED` ⚖
RWA / tokenized equities	Issuance fees + secondary-trading take rate + **AUM/management-fee** share + dividend/corporate-action processing	bps on AUM + take rate	`EQUITIES_ENABLED` ⚖
Collateralized lending	Interest spread on RWA-backed loans	spread over cost of funds	(PRD v2) ⚖
Own-rail economics	Recapture the partner share once you hold the licences (interchange, MT, custody); the **Wyoming SPDI** custody-at-scale option	margin recapture	Corp C ⚖
Starter (teen/family)	Family subscription + (gated) interchange on teen cards	~$5–10/mo/family	`TEEN_ENABLED` ⚖

---

3 3. The ARPU stack & unit economics

Revenue compounds because each wave adds a line, not a discount. Illustrative **per-user revenue stack** (benchmarked, monthly, blended):

```
Collector only (Phase A):        subscription (a few $)                        →
+ Marketplace buyer/seller (B):  + take rate × trade volume                    →
+ Primary account (B):           + interchange × spend + NIM × balance + FX spread
+ Investor (C):                  + brokerage/RWA take + AUM share
```

- **Attach rate is the master lever** — the same MAU is worth 3–5× more when card + balance + FX + RWA attach. Growth-first spend should buy *attach*, not just signups.
- **Margin moat:** with operating cost targeted **<$0.50/MAU** (agents, not headcount; PRD), even thin per-line take rates clear healthy contribution margin — the structural reason Goeman can price under Robinhood/Chime/eBay and still profit.

---

4 4. Illustrative projection scenarios *(illustrative — not a forecast)*

No real traction exists yet; these show the **shape** (an S-curve gated by licensing) and the **levers**, not a prediction. Inputs are blended-ARPU × MAU × attach; treat the numbers as placeholders.

	Year 1 (Phase A)	Year 2 (Corp B)	Year 3 (Corp C)
Live revenue lines	subscriptions, tokenization	+ marketplace take, interchange, NIM, FX	+ brokerage/RWA, lending, own-rail
Low	nominal (waitlist + founding sellers)	modest (marketplace ramps)	meaningful (stack attaches slowly)
Base	thin but real	**inflection** (take rate + interchange carry it)	compounding (ARPU 3–5× via attach)
High	small	strong marketplace + primary-account attach	full-stack ARPU + own-rail margin

Sensitivity (what actually moves the model): (1) **attach rate** across waves, (2) **marketplace take rate** vs. the eBay-beating promise, (3) **MAU** from the guerrilla wedge, (4) **NIM/interchange** terms from the partner bank, (5) **Corp-B/C timing** — every Phase-B/C line is zero until its licence lands.

---

5 5. Compliance coupling — revenue you can't book until the gate clears

Every line is gated by a prod-fatal switch (`LAUNCH-READINESS.md` §3) and a Corp phase. This reconciles 1:1 with the GTM rollout waves (`GTM-COLLECTIBLES-LAUNCH.md` §6).

Revenue line	Switch	Phase
Subscriptions / tokenization / promotion	(none — software)	**A**
Marketplace take rate	`COLLECTIBLES_ESCROW_ENABLED`	B ⚖
Card interchange	`CARDS_ENABLED`	B ⚖
NIM / float, ACH/wire/instant	`BANK_RAILS_ENABLED`	B ⚖
FX spread	`FX_ENABLED` / `FX_SETTLEMENT_ENABLED`	B/C ⚖
Bill-pay	`BILLPAY_ENABLED`	B ⚖
Goeman Pay (merchant SaaS only)	`ARGUS_PAY_ENABLED`	B/C ⚖
Brokerage	`TRADING_ENABLED`	C ⚖
RWA / equities	`EQUITIES_ENABLED`	B/C ⚖
Teen/family	`TEEN_ENABLED`	B/C ⚖

6 6. Flag-and-avoid — the edgy revenue lines

Three tempting lines that **conflict with the brand and/or carry regulatory risk**. Recommendation: **avoid or defer-with-counsel.**

- **PFOF (payment for order flow).** Tempting "free trading" economics, but it's under regulatory scrutiny, optically toxic, and **contradicts the PRD anti-positioning** ("not an investing app, no advice, marketplace not exchange"). **Avoid** — monetize brokerage via transparent commission/spread + margin + subscription instead. ⚖
- **Marketed yield-on-balances.** Paying advertised "yield" on customer balances can make the balance look like an **unregistered security** (and intersects the GENIUS-Act stablecoin regime). Earn **net interest margin** quietly via the partner-bank sweep (§2 Phase B), but **do not market a yield** as a product feature without securities counsel. **Defer ⚖.**
- **Data monetization.** Selling/sharing user behavioral data breaks the **trust moat** that the whole authentication/provenance brand is built on, and triggers GLBA/CCPA exposure. **Avoid** — data powers *your* product (discovery, fraud), it is not a product you sell. ⚖

7. Margin moat & risks

The moat is margin, not a single line. The agent-operated back office (support/compliance/ops at <$0.50/MAU) lets Goeman run thin take rates profitably — the durable advantage incumbents bolt on later and can't match on cost structure.

Risk	Mitigation
Take-rate compression (race to zero vs. eBay/incumbents)	Win on **trust + provenance + escrow**, not just price; the cost moat protects margin
Interchange caps / Durbin	Use a Durbin-exempt partner BIN; don't over-index on interchange
Incumbent copy (Robinhood/PayPal)	Supply moat + the agent-cost advantage + the one-app cross-sell
Regulatory shift (stablecoin/securities)	Keep the brand-safe lines; flag-and-avoid §6; counsel-gate every regulated line ⚖️
Corp-B/C timing slip	Revenue is gated on licensing — fund the runway accordingly; the GTM keeps the audience warm with the Phase-A product

8. The one-line model

Subsidize the collectibles wedge to acquire a trusted base; monetize the stack — marketplace take, interchange, net-interest-margin, FX, then brokerage/RWA and own-rail margin — one compliance unlock at a time; and out-margin everyone because the back office is agents, not headcount.

Companion documents: `GTM-COLLECTIBLES-LAUNCH.md` *(the marketing waves these revenue lines attach to),* `LAUNCH-READINESS.md` *§3 (the prod-fatal switches gating each line),* `CORPORATE-STRUCTURE.md` *(Corp A/B/C),* `RAILS-CURRENCY-STRATEGY.md` *(the FX spread),* `PAYMENT-NETWORK-STRATEGY.md` *(the zero-interchange Goeman Pay wedge),* `goeman_prdv1/00`, `/02` *(subscription tiers + fee-structure positioning).*
