Neobank + RWA Roadmap

Goemon Global Finance — tokenization MVP + phased neobank expansion

GOEMON GLOBAL FINANCE · CONFIDENTIAL — FOUNDER · JULY 1, 2026

Strategic guidance only — not legal, financial, tax, or investment advice.
Securities, money-transmission, and corporate-formation decisions must be reviewed by licensed counsel and a CPA before you act. Sections flagged “ see counsel” are where this matters most.

Contents

1. 1. What already exists (reposition — do not rebuild)
2. 2. What is genuinely net-new (this roadmap adds it)
3. 3. RWA products to offer (from the competitive review)
4. 4. Phased rollout (waves on the compliance ramp)
5. 5. Compliance-gate summary

Goemon — Neobank + RWA Roadmap

Thesis: Goemon launches as a **tokenization-first, non-custodial** product (the Phase-A MVP, already built) and layers on the neobank feature set that Chime / Revolut / Robinhood have proven — **without displacing tokenization as the wedge**. Every added feature slots into the existing **A → B → C compliance ramp** ([docs/business/CORPORATE-STRUCTURE.md](#)): A = non-custodial software, B = partnered (BaaS + FinCEN MSB), C = licensed (MTLs / broker-dealer / transfer agent).

Competitor + RWA teardown (cited, current): [docs/business/RWA-NEOBANK-COMPETITIVE-REVIEW.md](#). The single most important lesson from that review: **be the distribution / wallet / ledger layer, not the issuer** — adopt the license-free compliance standard (ERC-3643 + ONCHAINID) and *partner* the regulated stack (BD / ATS / transfer agent / fund wrapper) rather than build it. Ondo *bought* a broker-dealer; Franklin pairs infra with a licensed fund manager; Goemon's non-custodial + ledger↔chain reconciliation design already fits "hold the token, mirror the position, partner the issuer."

1 1. What already exists (reposition — do not rebuild)

Most requested feature lines exist as **simulated Stage-1 seams** with prod-fatal kill-switches (see [CLAUDE.md](#) build status). The roadmap **repositions** them under a competitor-framed narrative and hardens them via partners; it does not restart them.

Feature line	Answers	Today (phase / status)
High-Yield Savings	Chime HYSA	Earn / Treasury (ATB) built (Phase 19/Treasury sim); tokenized-yield model, not a bank APY
Kids & Teens	Chime / Greenlight	Phase 22 Goemon Starter built as sim stubs (households, teen debit, savings/goals, gamification, credit-builder, custodial)
Trading — crypto & stocks	Robinhood	Phase 17 trading sim (Stage 1–2) + Phase 18.6 tokenized equities sim
Cards (debit)	Chime / Revolut	Phase 19.4 debit-card lifecycle sim (<code>cardService</code>)
Bank rails / on-off-ramp / bill-pay / lending	Chime / Revolut	Phase 19 built as sim seams
Payments	Revolut / Cash App	Phase 21 Goemon Pay (merchant intents + escrow) sim
SmartChat (conversational money)	— (differentiator)	Phase 6 built + Phase 15 human-gated agent ops built
Tokenized RWA marketplace	Securitize / RealT	Phase 8 built (Invest/Collect), compliance-gated ledger holdings

2. What is genuinely net-new (this roadmap adds it)

Four new phases, design-stubbed now, built in later waves:

New phase	What	Reuses
Phase 25 — SMB / Business Banking	Business entity accounts, checking/savings, loans, payments/payroll/invoicing	Ledger, Phase-19 bank rails + cards, Phase-21 Pay
Phase 26 — Agentic Trading & Portfolio Mgmt	Agent-driven trading + portfolio management on SmartChat + the Phase-15 runner (advise → gate → deterministic execute)	Phase 6/15/17, new scoped MCP tools
Phase 27 — Virtual & Credit Cards	Virtual cards, a consumer credit card, and agent-issued programmable cards (per-agent limits, burn-after-use)	Phase 19.4 <code>cardService</code> / <code>CardProcessor</code>
Phase 28 — RWA Expansion	Tokenized treasuries, private credit, real estate, tokenized funds/equities, issuance-as-a-service	Phase 8 / 18.6 marketplace + compliance + reconciliation

Design docs: `docs/PHASE-25-SMB-BUSINESS-BANKING.md` , `docs/PHASE-26-AGENTIC-TRADING-PORTFOLIO.md` , `docs/PHASE-27-VIRTUAL-CREDIT-CARDS.md` , `docs/PHASE-28-RWA-EXPANSION.md` .

3 3. RWA products to offer (from the competitive review)

Prioritized menu; each tagged with the model it follows and its compliance gate. **Goemon** holds the token, mirrors the position, and partners the issuer — it does not become the fund/BD/TA.

#	Product	Model to follow	Gate	Ramp
1	Tokenized-treasury yield ("cash that earns") — the #1 retail wedge	Ondo USDY (Reg S yieldcoin) / Franklin BENJI ('40-Act MMF token) — distribute, don't issue the wrapper	Reg S distribution / partner the registered fund + custodian; Goemon's reconciliation = the transfer-agent pattern	A→B
2	Private-credit yield (higher-yield savings tier)	Maple syrupUSDC (~8% APY) — wrap the composable token, don't underwrite	Partner/wrap; disclosure	B
3	Security-token issuance-as-a-service	Tokeny ERC-3643 + ONCHAINID (adopt, license-free) + Securitize-style BD/TA/ATS (partner)	Standard is Phase A; primary/secondary needs partner BD/ATS + transfer agent	A→C
4	Tokenized funds / equities	Centrifuge SPXA index / Dinari-style 1:1 equities (Goemon's Phase 18.6 seam)	Reg S / index license; 1:1 equity needs issuer + BD/TA/custodian/ATS	B→C
5	Tokenized real estate	RealT LLC-per-property + rent-in-stablecoin — surface via an issuer partner , don't originate deeds	Reg D (accredited) / Reg S; per-entity legal overhead	B→C

Patterns to steal (Phase A, no license): transfer-agent pattern (Franklin — chain as record, reconciled to authoritative ledger; Goemon already has it); composable-but-compliant wrappers (Securitize sToken / Centrifuge deRWA → maps to Goemon's compliance-gated holdings + Phase 18.6); deposit-token vs stablecoin framing (Kinexys); **EU/MiCA-first regulatory arbitrage** (Robinhood shipped tokenized stocks in the EU first). **Avoid / partner:** the US securities stack, a bank-grade fiat stablecoin (partner Circle/SG-Forge), underwriting credit, originating deeds, and the commoditized "RWA tokenization dev-shop" layer (Blockchain App Factory / BlockRidge disclaim the compliance burden — the opposite of Goemon's moat).

4. Phased rollout (waves on the compliance ramp)

Wave 0 — MVP launch (ship now, Phase A). The built tokenization product: non-custodial wallet, DID/VC identity, SmartChat, Invest/Collect marketplace, external agents, internal ops. No customer fiat custody, no MSB. Revenue: software/tokenization fees. (*Unchanged by this roadmap.*)

Wave 1 — first post-MVP (the user's chosen priorities). Runs in parallel where gates differ:

- **RWA deepening (Phase 28)** — lead with **tokenized-treasury yield** (product #1): distribute a yieldcoin / MMF token as "cash that earns," reusing Phase-8 holdings + reconciliation. Adopt ERC-3643 + ONCHAINID as the issuance standard (Phase A). *Gate: Reg S distribution / fund + custodian partner (B).*
- **Trading + Agentic portfolio (Phase 17 + 26)** — harden the trading seam and add agent-driven trading/portfolio management (advise → gate → execute). *Gate: broker-dealer / clearing + market-data partner (C); agentic layer is Phase A software on top.*
- **SMB start (Phase 25)** — business entity accounts + payments first (reuse Goemon Pay + bank rails). *Gate: BaaS partner + FinCEN MSB (B).*
- **Consumer-banking fast-follow** — HYSA (product #1/#2), debit + **virtual cards (Phase 27)**, teens (Phase 22) — mostly built; hardens via the same BaaS partner as SMB. *Gate: BaaS + MSB (B).*

Wave 2 — licensed / own-rails (Phase C). Consumer **credit** card (Phase 27), 1:1 tokenized equities + secondary resale venue (Phase 18.6 → ATS), real-estate issuance (Phase 28 #5), own MTLs / broker-dealer / transfer-agent registration where unit economics justify recapturing margin.

5. Compliance-gate summary

Wave	Unlocks	Hard gate
0	Tokenization MVP (software)	Entity + AML policy + terms (done)
1	Treasury yield, SMB payments, trading, consumer banking/cards, agentic PM	BaaS partner + FinCEN MSB ; broker-dealer/market-data partner for live trading; fund + custodian for treasury yield
2	Credit card, tokenized-equity venue, real-estate issuance, own rails	State MTLs / broker-dealer / ATS / transfer-agent registration ; issuer/placement partners

This roadmap is strategy, not legal advice. Every gate must be confirmed with fintech/securities counsel before launch (註). Figures and competitor facts are cited in docs/business/RWA-NEOBANK-COMPETITIVE-REVIEW.md (with uncertainty flags).
