RWA & Neobank Competitive Review — Goemon Global Finance

Sources are cited inline; figures current as of **July 2026** (research pass). RWA AUM/TVL figures move fast and often disagree across sources — where they conflict this document reports a range and flags it. Claims that could not be verified against a primary source are marked **UNVERIFIED**.

Goemon is a tokenization-first, non-custodial neobank: Hedera settlement, a native (Secure-Enclave) wallet, a double-entry ledger as the source of truth, W3C Verifiable Credentials + OID4VP + MCP for agent access, and tokenized real-world assets. This review teardowns the consumer/SMB neobank incumbents, maps the 14 RWA/tokenization players Goemon must position against, and synthesizes a prioritized product menu tied to a Phase A→B→C compliance ramp.

- **Phase A** = non-custodial software only (no license needed; the user's own wallet holds keys; Goemon is UX + ledger mirror).
 - **Phase B** = partnered / MSB (BaaS partner bank, FinCEN MSB, licensed on/off-ramp and fund-distribution partners bear the regulated function).
 - **Phase C** = licensed / broker-dealer / transfer-agent / ATS (Goemon or a "Corp C" holds the securities licenses; the hard, slow, expensive tier).
-

1 §1 — Neobank Teardown (Robinhood · Revolut · Chime)

Feature matrix

	Banking / HYSA	Cards	Trading / Crypto	Teens	SMB / Business	Agentic / AI
Robinhood	Yes — Robinhood Banking (checking + savings) for Gold, ~3.5% APY, via Coastal Community Bank (not a chartered bank)	Yes — Gold Card (credit), 300k+ holders	Yes (core) — stocks/ETFs/options, crypto, staking, EU perpetual futures, tokenized stocks (EU/MiCA)	Partial — custodial UGMA/UTMA; no standalone teen product	No — retail investing focus	Yes — Cortex AI investing assistant + Digests; chat-to-trade rolling out to Gold
Revolut	Yes — full UK banking licence (Mar 2026) , FSCS-protected; EU bank via Lithuania; savings/interest	Yes — debit + credit, multi-currency	Yes — crypto (250+ tokens, Revolut X, MiCA CASP), stocks, commodities; self-custody via Trust Wallet	Yes — Kids & Teens (6–15) + 16–17 account	Yes — Revolut Business, 767k accounts, ~30k companies/mo onboarding	Yes — in-app AI assistant; AI fraud platform (10x case throughput)
Chime	Yes — no-fee checking/savings via The Bancorp Bank & Stride Bank (not a chartered bank); early direct deposit	Yes — debit; Chime Card secured credit-builder (Sept 2025)	No — no trading, no crypto	No — 18+ only	No — consumer only	Limited — ML for underwriting/risk; no marketed consumer AI agent

Robinhood

US-listed (HOOD) broker-dealer that has grown into a financial super-app: commission-free stocks/ETFs/options/crypto, a Gold subscription (record 3.5M subscribers Q2 2025), the Gold Card, wealth "Strategies," and **Robinhood Banking** delivered through Coastal Community Bank (Robinhood is a fintech, not a chartered bank). Its standout tokenization move: **tokenized US equities** launched June 30, 2025 in Cannes for EU/EEA users under a MiCA license, expanding toward 2,000+ "Classic Stock Tokens," alongside a revealed 3-phase tokenization plan and its own L2 ("Robinhood Chain") ([Robinhood newsroom](#); [3-phase plan](#), [CoinDesk Nov 2025](#)). AI: **Cortex** investing assistant with chat-to-trade rolling out to Gold ([Robinhood newsroom](#)).

- **Lesson for Goemon:** Robinhood is the closest analog to the tokenization-first vision and validates that tokenized equities + an own chain + agentic trading is a real market, and that **launching in the EU under MiCA first is the practical regulatory-arbitrage path**. But its tokens are custodial and issuer-permissioned — Goemon's **non-custodial, wallet-native** angle is the differentiator Robinhood does not offer.

Revolut

The largest and most diversified incumbent: **68.3M retail customers, \$6B revenue (+46%), \$2.3B profit (+57%) in FY2025** (Revolut FY25 results; CoinDesk Mar 2026). A genuine multi-product bank/super-app: everyday banking, multi-currency cards, FX/remittance, savings, trading, one of the deepest crypto stacks (250+ tokens, Revolut X, EU MiCA CASP), real teens and business franchises. Regulated as a bank in 30+ markets (EU license via Lithuania since 2021), **received its full UK banking license March 2026**, and has filed for a US banking license. In Dec 2025 it partnered with **Trust Wallet for instant self-custody crypto buys** in the EEA (CoinDesk).

- **Lesson for Goemon:** Revolut proves the super-app breadth playbook and that a licensed-bank posture unlocks scale/trust — but breadth + real licenses is *its* moat. A tokenization-first entrant must **pick a wedge, not match all 11 revenue lines**. Its Trust Wallet self-custody integration signals even incumbents see non-custodial demand; Goemon can lead there rather than bolt it on.

Chime

US mass-market consumer neobank positioned on fee avoidance: no-fee checking/savings, no overdraft (SpotMe), early direct deposit. Crucially **not a chartered bank** — runs through The Bancorp Bank and Stride Bank, staying Durbin-exempt so ~~67% of revenue is debit interchange.~~ ****IPO'd June 11, 2025 (\$11.6B valuation, \$864M raised)****, reporting **FY revenue +31% to \$2.2B, 9.5M active members** (2025 shareholder letter). Launched the **Chime Card** secured credit-builder in Sept 2025 (Chime). No trading, no crypto, no teens, no business — deliberately narrow.

- **Lesson for Goemon:** Chime shows a focused single-segment neobank can reach 9.5M users and a public listing **without a charter, trading, or crypto** — the BaaS + interchange model works at scale (validates Goemon's Phase B posture). But interchange-dependence and the total absence of crypto/tokenization is exactly the ceiling Goemon aims past. Takeaway: discipline (nail one wedge, own the fee narrative), not product mimicry.

2 §2 — RWA Landscape (14 firms by archetype)

Master comparison table

Firm	Archetype	What they offer	Model	Chains / standards	Regulated posture	Segment
Ondo Finance	Tokenized treasuries	OUSG, USDY yieldcoin, Ondo Global Markets, Ondo Chain (L1)	Issuer + B2B infra + regulated venue	Ethereum, Solana, BNB, Aptos, Polygon; own L1	OUSG = Reg D 506(c)/3(c)(7); USDY = Reg S + FinCEN MSB; bought Oasis Pro → SEC BD + ATS + TA	Institutions/accredited non-US retail; devs
Franklin Templeton BENJI / FOBXX	Tokenized MMF	FOBXX '40-Act govt MMF; BENJI onchain share token; Benji app	Fund issuer + own transfer agent; B2C app + B2B	Stellar, Polygon, Arbitrum, Aptos, Avalanche, Base, Solana, Ethereum (8 chains)	US-registered ' 40-Act MMF '; blockchain = transfer-agent record, reconciled daily; allowlist only	US retail + institutions
Libeara (SC Ventures)	Tokenized treasuries	Delta platform; SGD Delta bond fund, Delta Wellington ULTRA, tokenized gold	B2B tokenization infra + fund-enablement	Ethereum, Stellar; ULTRA → Arbitrum, Avalanche, Solana	Singapore-centric; funds issued by licensed mgrs (FundBridge); Standard Chartered custody ; whitelist	Institutional / professional
Centrifuge	Private credit / infra	Tokenization infra, deRWA wrappers, Anemoy funds; SPXA tokenized S&P 500	B2B infra + asset-mgmt arm	Ethereum, Base, Arbitrum, Avalanche, BNB; deRWA on Solana/Stellar; ERC-20	Funds off-chain (Cayman SPs via Anemoy/Janus Henderson); S&P DJI license; not a US BD	Institutions, asset mgrs, DeFi
Maple Finance	Private credit	Institutional lending; syrupUSDC/USDT yield stablecoins; BTC-backed loans	Lending protocol / on-chain credit manager	Ethereum + Solana (Chainlink CCIP); Arbitrum, Base, Plasma; ERC-20/SPL	Permissioned KYC-gated borrower pools; syrupUSDC permissionless; no stated US BD	Institutions/funds; retail holds syrupUSDC
RealT (RealToken)	Real estate	Fractional tokenized US rental homes (\$50+); rent in stablecoin; RMM lending	B2C issuer / marketplace (LLC-per-property)	Ethereum + Gnosis Chain (primary); ERC-20 = LLC membership	Reg D (US accredited) + Reg S ; Delaware/Wyoming LLC per property; FINRA placement agent	Global retail; US must be accredited
Securitize	Security-token infra	End-to-end tokenization + transfer agency + ATS + fund admin;	B2B infra + agent-of-record +	Ethereum + 8 networks (Avalanche, Solana, BNB,	SEC-registered BD, transfer agent, fund admin, ATS (subsidiaries)	Institutional + accredited

Firm	Archetype	What they offer	Model	Chains / standards	Regulated posture	Segment
		DS Protocol; sToken	venue operator	TRON); DS Protocol; sToken = ERC-4626		
Tokeny Solutions	Security-token infra	T-REX platform; open ERC-3643 standard; ONCHAINID; T-REX Ledger	B2B software toolkit (white-label)	EVM (Ethereum, Polygon, Avalanche); ERC-3643 / T-REX ; ONCHAINID	Software vendor (not BD/TA); compliance in-contract; Apex-owned (May 2025)	Issuers, TAs, fund admins, devs
SG-Forge	Security-token infra / stablecoin	EURCV & USDCV MiCA stablecoins (CoinVertible)	Bank-subsidiary settlement-asset issuer	Ethereum, Solana, Stellar, XRP Ledger; 100% cash-backed	SocGen subsidiary; MiFID2 firm, EMI under MiCA, French DASP	Institutions, exchanges, MMs
Kinexys (ex-Onyx, J.P. Morgan)	Security-token infra / bank platform	Kinexys Digital Payments (ex-JPM Coin), Digital Assets; JPMD deposit token	Bank-operated permissioned platform	Permissioned chain; JPMD on Base ; intent on Canton	Regulated bank; deposit token = bank liability, not stablecoin	Large institutions, corporates
Blockchain App Factory	Build-shop	RWA tokenization <i>development services</i>	Dev shop / white-label builder (not an issuer)	ETH, BSC, Polygon, Avalanche, Algorand, NEAR, Hedera; ERC-20/721/1155, 1400, 3643, SPL	Builds for clients; no regulated status itself	Clients wanting a build
Vottun	Emerging infra	Blockchain infra/API-SDK; VTN token	Infra / API provider	Multi-chain (ETH, Stellar, Algorand, Bitcoin, BSC per site)	Spanish regulatory sandbox (PwC + Stellar)	Developers
BlockRidge	Emerging infra	Tokenization SaaS + cap-table + advisory (Valuit Technology LLC)	SaaS + consulting (explicitly "SaaS only")	Claims ERC-3643 + KYC/AML/GDPR	Explicitly disclaims being adviser/broker/dealer/bank	Family offices, VC/PE, individuals
Verta	Uncertain	No distinct RWA firm confirmed under this exact name	—	—	—	—

(That is the 14: Ondo, Franklin/BENJI, Libeara, Centrifuge, Maple, RealT, Securitize, Tokeny, SG-Forge, Kinexys/Onyx, Blockchain App Factory, Vottun, BlockRidge, Verta.)

Tokenized treasuries / MMF — Ondo · Franklin BENJI · Libeara

Ondo Finance is the largest pure-play tokenized-treasury issuer and is vertically integrating into a regulated stack. **OUSG** (short-term Treasuries) is a Reg D 506(c) / 3(c)(7) private fund for accredited investors + QPs, largely custodying via BlackRock's BUIDL; **USDY** (a yield-bearing note) is offered under Reg S to non-US persons with the issuer registered as a FinCEN MSB ([legal-framework analysis](#)). Ondo announced **Ondo Chain**, a permissioned-validator L1 for institutional RWAs, in Feb 2025 ([CoinDesk](#)), and completed the **acquisition of Oasis Pro** (an SEC-registered broker-dealer, ATS, and transfer agent) in Oct 2025 — buying, rather than building, the compliant US securities path ([Blockworks](#); [The Block](#)). AUM is cited ~\$1.6B (best-anchored, at the Oasis Pro close) up to \$1.8–2.75B in promotional late-2025/early-2026 numbers — treat the higher figures as unverified.

Franklin Templeton BENJI / FOBXX is the gold standard for a *retail-eligible* tokenized MMF. BENJI is the onchain share token of **FOBXX**, a genuine US-registered '40-Act government money market fund — the first US-registered mutual fund to use a public blockchain as its system of record (Stellar, 2021) ([Stellar press](#); [SEC 485BPOS](#)). The blockchain is a **transfer-agent record, not custody** — reconciled daily to the official register, with only allowlisted wallets able to hold BENJI ([BENJI deep dive](#)). It spans 8 chains and reported ~\$828M AUM in Q1 2026 (secondary source; the fund's own page is the primary check).

Libeara is a **B2B tokenization platform** incubated by **SC Ventures** (Standard Chartered's venture arm), launched Nov 2023 ([SC Ventures](#)). Its **Delta** platform runs subscription/issuance/transfer/redemption; licensed managers (notably **FundBridge Capital**) are issuers of record and **Standard Chartered provides custody**. First fund: a tokenized SGD government bond fund rated **AA by Moody's** ([Ledger Insights](#)). In Dec 2025 the **Delta Wellington ULTRA** short-Treasury fund drew **\$100M+** commitments (Stable + Theo) and an AAA rating from Particula ([CoinDesk](#)). **UNVERIFIED**: a briefed **Libeara-DBS partnership** could not be confirmed — all sources attribute custody/backing to Standard Chartered, not DBS.

Private credit — Centrifuge · Maple

Centrifuge is the clearest "picks-and-shovels" RWA play: whitelabel tokenization infra, **deRWA** wrappers that turn permissioned institutional fund tokens (deJTRSY, deJAAA) into freely-transferable DeFi-composable ERC-20s, and **Anemoy**, its in-house fund-structuring arm. Its marquee 2025 move was the **S&P Dow Jones Indices collaboration** producing **SPXA**, the first S&P-licensed tokenized S&P 500 index fund, live on Base in Sept 2025 ([Centrifuge blog](#); [S&P DJI](#)). TVL diverges by source — Centrifuge's own site shows ~\$1.8B / 1,768 assets while late-2025/2026 press cites ~\$1.34B ("third-largest RWA issuer"), JAAA crossing \$1B; partners include Janus Henderson, Apollo, New York Life, Coinbase.

Maple Finance is an on-chain **institutional credit marketplace** where professional "delegates" (Maple Direct, Room40, AQRU) underwrite USDC loans to KYC'd borrowers. Its most Goemon-relevant primitive is **syrupUSDC / syrupUSDT**: a permissionless, composable yield-bearing stablecoin packaging the yield of the *permissioned* loan book (~8% APY) so retail holders get institutional credit yield without passing the pool's KYC gate. In 2025 Maple went cross-chain to Solana via Chainlink CCIP (plus Arbitrum, Base, Plasma) and integrated with Aave, Pendle, Kamino ([Maple 2025 review](#); [Solana expansion](#)). Scale

(source/date-dependent, distinct metrics): TVL ~\$2.1B (May 2026), \$4B+ deposits / \$4.6B+ AUM, \$20B+ cumulative originations since 2019.

Real estate — RealT

RealT (RealToken) is the pioneer B2C tokenized-real-estate issuer (2019), selling fractional shares of US rental homes from ~\$50 with rent paid in stablecoin. The legal spine is **one LLC per property** (Delaware/Wyoming) holding the deed, with the ERC-20 token representing an LLC membership interest. Posture: **Reg D** (US accredited) + **Reg S** (offshore), KYC/AML, a FINRA-member placement agent; tokens run on Ethereum and primarily **Gnosis Chain** (low-fee rent distribution + the RMM lending market) ([legal/compliance overview](#); [RealT FAQ](#)). Traction: 700+ properties, ~\$130M asset value, Gnosis TVL ~\$146M (Jun 2025). The **LLC-per-property + rent-in-stablecoin** model is the proven template, but the property-ops/title/per-entity legal overhead is enormous.

Security-token issuance infra / ERC-3643 — Securitize · Tokeny · SG-Forge · Kinexys(Onyx)

Securitize is the US market leader precisely because it owns the full **regulated stack** through subsidiaries — SEC-registered broker-dealer, digital transfer agent, fund administrator, and an SEC-regulated **ATS**. It is the tokenization platform + transfer agent for BlackRock's **BUIDL** (\$3.07B, the largest tokenized MMF) and serves Apollo, KKR, Hamilton Lane, VanEck, BNY, with **>\$4B total AUM** (May 2026). Its **sToken** (ERC-4626 wrapper) produced **sBUIDL** — RWA yield that becomes DeFi collateral. Securitize is going public on the NYSE under ticker **SECZ** (\$400M raise, July 2026) ([Securitize press](#); [BUIDL collateral](#)).

Tokeny Solutions (Luxembourg, 2017) is the creator and maintainer of **ERC-3643** (the T-REX protocol) — the exact permissioned-token standard Goemon's PRD names — plus **ONCHAINID** on-chain identity. It is B2B software (not a licensed BD/TA); compliance is enforced at the contract level. In **May 2025 Apex Group** (fund admin, \$3T+ AUA, targeting \$100B tokenized by June 2027) took a majority stake, and Tokeny/Apex unveiled the **T-REX Ledger** (a Polygon-stack reference chain) ([ERC-3643](#); [Apex/T-REX Ledger](#)). Closest architectural fit to Goemon's stack.

SG-Forge (Société Générale-FORGE) is a bank subsidiary and one of the first regulated banks to issue **MiCA-compliant stablecoins**: **EURCV** (compliant since MiCA's stablecoin rules took effect Jul 1, 2024) and **USDCV** (launched Jun 25, 2025), both 100% cash-backed and 1:1 redeemable, deployed on Ethereum, Solana, Stellar, and XRP Ledger. It is regulated as a **MiFID2 investment firm**, an **EMI under MiCA**, and a **French DASP** ([CoinVertible](#); [USDCV](#), [CoinDesk](#)). It is a settlement-asset issuer, not a tokenization platform.

Kinexys (ex-Onyx by J.P. Morgan). **Confirmed: Onyx was rebranded to Kinexys in November 2024** ([J.P. Morgan](#); [Ledger Insights](#)). Product lines: **Kinexys Digital Payments** (renamed JPM Coin — >\$1.5–2T notional since inception, ~\$2–3B average daily), **Kinexys Digital Assets** (tokenization/collateral), and **Kinexys Labs**. In June 2025 it piloted **JPMD**, a permissioned **USD deposit token** — explicitly a *bank deposit liability, not a stablecoin* — on **Base** (Coinbase's public L2), with intent to issue natively on the Canton Network ([JPMD](#)). Closed, bank-owned — not infrastructure Goemon can build on; the transferable idea is the **deposit-token vs stablecoin** distinction.

Build-shops / emerging / uncertain — Blockchain App Factory · Vottun · BlockRidge · Verta

Blockchain App Factory (Confirmed as a dev shop, not a platform). A blockchain-development agency (India — Appstars Applications Pvt Ltd, Chennai + Singapore) that

builds tokenization platforms, smart contracts, KYC/AML integration, and white-label products *for clients* across real estate, private credit, funds, equity, and royalties, advertising ~8 chains and ERC-3643/ERC-1400 support ([RWA services page](#)). The *nature* of the business is verifiable; the self-reported scale metrics (12+ years, 800+ projects, 250+ experts) are marketing figures with no independent corroboration. Not an issuer, custodian, or regulated entity.

Vottun (Partial). A genuine blockchain-infrastructure company offering REST APIs/SDKs so Web2 firms can build tokenization dApps, with concrete RWA examples (carbon-credit tokenization) and a VTN token ([site](#)). Funding is small — Tracxn reports ~\$440K across 3 rounds (seed, May 2023; investors incl. Draper B1, LLYC Venturing, Stellar) ([Tracxn](#)).

Discrepancy: Tracxn lists Vottun in Los Angeles with a CEO "Rohan Hall," conflicting with strong Spain signals (Spanish regulatory sandbox with PwC + Stellar; Spanish investor LLYC) — treat HQ/leadership as unconfirmed.

BlockRidge (Partial). A real but small SaaS + advisory play (operated by Valuit Technology Delaware LLC) positioning as "tokenization infrastructure for the onchain economy" — tokenization, cap-table management, and consulting ([site](#); [rwa.io overview](#)). Its own site is explicit that it provides "**SaaS technology solutions only**" and is **not** an adviser/broker/dealer/bank — compliance is pushed to the customer. Third-party summaries attribute ERC-3643 + KYC/AML/GDPR support. Traction claims (30+ companies, 100K+ users) are self-reported and **unverified**.

Verta (UNVERIFIED). No distinct, standalone RWA/tokenization firm could be confirmed under the exact name "Verta." A search snippet ("Verta simplifies the lifecycle of digital securities") could not be traced to a primary source. What actually exists under similar names: **Vertalo** (a real SEC-registered digital transfer agent / tokenization platform, Austin, 2017 — [vertalo.com](#)); **VERT Capital** (a Brazilian securitizer tokenizing structured credit on XRPL/XDC, planning up to \$1B — [CoinDesk](#)); and the unrelated **Verta.ai** ML company. Honest assessment: "Verta" as briefed is most plausibly a garbled reference to **Vertalo** or **VERT Capital**; flagged UNVERIFIED rather than invented.

3 §3 — What Goemon Should Offer (prioritized RWA product menu)

Cross-cutting thesis, echoed by every archetype: **the winning move for a non-custodial, tokenization-first neobank is to be the distribution/wallet/UX/ledger layer over regulated issuers — not the issuer of record.** Ondo bought a broker-dealer rather than build one; Centrifuge and Maple are integrate-and-wrap partners; Franklin/Libeara pair infra with a licensed fund manager + custodian; RealT shows the real-estate legal cost. Goemon's non-custodial wallet + double-entry ledger + ledger $\rightleftharpoons$ chain reconciliation invariant fits the "**hold the token, mirror the position, let a licensed partner be issuer**" model already in the repo's ERC-3643/compliance-module design.

Priority	Product	Model to follow	Compliance gate	Phase
1	Tokenized-treasury yield (retail wedge) — distribute a yieldcoin / retail MMF token as the default "cash that earns"	USDY (Reg S) or BENJI ('40-Act) — <i>distribute, don't issue</i>	Non-US retail via a Reg S yieldcoin, or allowlisted '40-Act fund token via partner TA; copy Franklin's "blockchain = record, reconciled daily" (already Goemon's reconciliation invariant)	A→B
2	Private-credit yield primitive — wrap an institutional-credit yield token as a higher-yield option	Maple syrup USDC — wrap the permissionless yield token, don't underwrite	None to <i>hold/distribute</i> a permissionless composable token; disclosure + suitability screening	A
3	Security-token issuance-as-a-service — let partners issue compliant tokens through Goemon's rails	Tokeny ERC-3643 + ONCHAINID (adopt the standard) + Securitize-style TA/BD/ATS (partner)	Standard is license-free to adopt (Phase A); primary issuance / secondary resale needs a partner BD/ATS + transfer agent	A (standard) → C (venue)
4	Tokenized funds / equities — tokenized S&P 500 / equity exposure	Centrifuge SPXA (index fund) / Dinari-style 1:1 tokenized equities (Goemon's Phase 18.6 seam)	Reg S / index-license for funds; 1:1 equity tokenization needs issuer + BD/TA/custodian/ATS	B→C
5	Tokenized real estate — fractional income-producing property	RealT LLC-per-property + rent-in-stablecoin — surface via an issuer partner, do NOT originate deeds	Reg D (accredited) / Reg S; LLC-per-property legal overhead; partner the issuer/placement agent	B→C

Design patterns to steal (Phase A, no license):

- **Transfer-agent pattern, not custody claim** (Franklin): blockchain as the *record*, reconciled to an authoritative ledger — Goemon already has this.
- **Composable-but-compliant wrapper** (Securitize sToken / Centrifuge deRWA): keep issuance-level transfer restrictions while making the token usable — maps to Goemon's compliance-gated ledger-derived holdings and Phase 18.6.
- **Deposit-token vs stablecoin framing** (Kinexys): a design idea for how Goemon models its own cash liability on-chain.
- **EU/MiCA-first regulatory arbitrage** (Robinhood): launch the boldest tokenization features where a MiCA/CASP path exists before the US securities path is ready.

What to avoid / partner rather than build: the US securities stack (BD/ATS/transfer agent — Ondo *bought* one; partner a Securitize-like); a bank-grade fiat stablecoin (SG-Forge shows the EMI/MiCA cost — partner Circle/SG-Forge); underwriting institutional credit (wrap

Maple, don't originate); originating real-estate deeds (RealT's per-entity overhead — partner the issuer). And the commoditized layer — generic "RWA tokenization development" (Blockchain App Factory, BlockRidge's SaaS-only disclaimer) — is *the opposite* of Goemon's thesis: the moat is being a **regulated-posture, non-custodial operator that takes on the compliance burden**, not a vendor that disclaims it.

Key uncertainties (flagged for the decision-maker)

- **Ondo AUM** is cited \$1.6B–\$2.75B across late-2025/2026; ~\$1.6B (Oasis Pro close) is best-anchored, higher figures are promotional.
- **Franklin FOBXX AUM** (~\$828M, Q1 2026) is from a secondary source; the fund's own page is the primary check.
- **Libeara–DBS partnership: UNVERIFIED** — sources attribute custody to Standard Chartered, not DBS.
- **Centrifuge TVL** (\$1.34B press vs \$1.8B own site) and **Maple TVL/deposits/AUM** (\$2.1B/\$4B/\$4.6B) are distinct metrics at different dates — treat as ranges.
- **RealT** property count / asset value are mid-2025 secondary figures.
- **Vottun HQ** (Spain vs LA) and leadership are unconfirmed.
- **BlockRidge** traction claims are self-reported and unverified.

- **Verta** is UNVERIFIED as a distinct RWA firm (likely a collision with Vertalo / VERT Capital).
